Contents of Volume 140

NUMBER 1, JANUARY 15, 1985

W. H. WUNNER, B. DIETZSCHOLD, C. L. SMITH, M. LAFON, AND E. GOLUB. Antigenic Variants of CVS Rabies Virus with Altered Glycosylation Sites ... 1

EMILIO A. EMINI, WILLIAM A. SCHLEIF, RICHARD J. COLONNO, AND ECKARD WIMMER. Antigenic Conservation and Divergence between the Viral-Specific Proteins of Poliovirus Type 1 and Various Picornaviruses 13

T. M. A. WILSON AND R. N. PERHAM. Modification of the Coat Protein Charge and Its Effect on the Stability of the U_1 Strain of Tobacco Mosaic Virus at Alkaline pH ... 21

CHRISTOS CLADARAS AND WILLIAM S. M. WOLD. DNA Sequence of the Early E3 Transcription Unit of Adenovirus 5 ... 28

CHRISTOS CLADARAS, BHEEM BHAT, AND WILLIAM S. M. WOLD. Mapping the 5′ Ends, 3′ Ends, and Splice Sites of mRNAs from the Early E3 Transcription Unit of Adenovirus 5 ... 44

P. P. C. MERTENS AND D. V. SANGAR. Analysis of the Terminal Sequences of the Genome Segments of Four Orbiviruses ... 55

P. W. G. CHU AND E. G. WESTAWAY. Replication Strategy of Kunjin Virus: Evidence for Recycling Role of Replicative Form RNA as Template in Semiconservative and Asymmetric Replication ... 68

PHILIP SERWER AND ROBERT H. WATSON. Alterations of the Bacteriophage T7 and T3 DNA Packaging Pathway in *Escherichia coli* Mutant TSN B ... 80

MARY K. POIROT, W. M. SCHNITZLEIN, AND M. E. REICHMANN. The Requirement of Protein Synthesis for VSV Inhibition of Host Cell RNA Synthesis ... 91

ELIZABETH W. NEWCOMB, RICHARD BINARI, AND ERWIN FLEISSNER. A Comparative Analysis of Radiation- and Virus-Induced Leukemias in BALB/c Mice ... 102

W. BLOCK, C. UPTON, AND G. MCFADDEN. Tumorigenic Poxviruses: Genomic Organization of Malignant Rabbit Virus, a Recombinant between Shope Fibroma Virus and Myxoma Virus ... 113

K. L. DESHPANDE AND A. PORTNER. Monoclonal Antibodies to the P Protein of Sendai Virus Define Its Structure and Role in Transcription ... 125

JAMES L. VAN ETTEN, DWIGHT E. BURBANK, ANNE M. SCHUSTER, AND RUSSEL H. MEINTS. Lytic Viruses Infecting a *Chlorella*-like Alga ... 135

MARC SITBON, JANE NISHIO, KATHY WEHRLY, AND BRUCE CHESEBRO. Pseudotyping of Dual-Tropic Recombinant Viruses Generated by Infection of Mice with Different Ecotropic Murine Leukemia Viruses ... 144

MARGO A. BRINTON, JEAN DAVIS, AND DOUGLAS SCHAEFER. Characterization of West Nile Virus Persistent Infections in Genetically Resistant and Susceptible Mouse Cells. II. Generation of Temperature-Sensitive Mutants ... 152

JUDITH K. BALL, LARRY O. ARTHUR, AND GREGORY A. DEKABAN. The Involvement of a Type-B Retrovirus in the Induction of Thymic Lymphomas ... 159

SHORT COMMUNICATIONS

N. ROSENBERG, M. REICHMAN, A. GERA, AND I. SELA. Antiviral Activity of Natural and Recombinant Human Leukocyte Interferons in Tobacco Protoplasts ... 173

C. HENRY, M. COQUILLAUD, S. SAULE, D. STEHELIN, AND B. DEBUIRE. The Four C-Terminal Amino Acids of the v-*erbA* Polypeptide Are Encoded by an Intronic Sequence of the v-*erbB* Oncogene 179

BARBARA L. HANDELIN AND DAVID KABAT. Cell Surface Receptors for Murine Leukemia Viruses: Two Assays and Their Implications ... 183

PRANAB K. MUKHERJEE AND ROBERT W. SIMPSON. Indomethacin Inhibits Viral RNA and Protein Synthesis in Cells Infected with Vesicular Stomatitis Virus ... 188

PHILIP DREIDING, PETER STAEHELI, AND OTTO HALLER. Interferon-Induced Protein Mx Accumulates in Nuclei of Mouse Cells Expressing Resistance to Influenza Viruses ... 192

A. E. VAN LOON, Th. H. ROZIJN, J. C. DE JONG, AND J. S. SUSSENBACH. Physicochemical Properties of the DNAs of the Fastidious Adenovirus Species 40 and 41 ... 197

A. T. HAASE, D. GANTZ, H. BLUM, L. STOWRING, P. VENTURA, A. GEBALLE, B. MOYER, AND M. BRAHIC. Combined Macroscopic and Microscopic Detection of Viral Genes in Tissues ... 201

ERRATUM

Volume 137, Number 2, September 1984: Amiya K. Banerjee, Dennis P. Rhodes, and Dalip S. Gill, "Complete Nucleotide Sequence of the mRNA Coding for the N Protein of Vesicular Stomatitis Virus (New Jersey Serotype)," pp. 432–438 ... 207

AUTHOR INDEX FOR VOLUME 140, NUMBER 1 ... 208

NUMBER 2, JANUARY 30, 1985

FRANCISCO GONZALEZ-SCARANO. La Crosse Virus G1 Glycoprotein Undergoes a Conformational Change at the pH of Fusion ... 209

ANURADHA SENGUPTA, PRABIR RAY, AND JYOTIRMOY DAS. Characterization and Physical Map of Choleraphage ϕ149 DNA ... 217

WILLIAM KLOETZER, RAZELLE KURZROCK, LYNDA SMITH, MOSHE TALPAZ, MARGERY SPILLER, JORDAN GUTTERMAN, AND RALPH ARLINGHAUS. The Human Cellular *abl* Gene Product in the Chronic Myelogenous Leukemia Cell Line K562 Has an Associated Tyrosine Protein Kinase Activity ... 230

MILES W. CLOYD, MARGIE M. THOMPSON, AND JANET W. HARTLEY. Host Range of Mink Cell Focus-Inducing Viruses ... 239

JEFFREY WILUSZ, JULIUS S. YOUNGNER, AND JACK D. KEENE. Base Mutations in the Terminal Noncoding Regions of the Genome of Vesicular Stomatitis Virus Isolated from Persistent Infections of L Cells 249

WILLIAM G. BENDENA, MOUNIR ABOUHAIDAR, AND GEORGE A. MACKIE. Synthesis *in Vitro* of the Coat Protein of Papaya Mosaic Virus ... 257

STEVEN PALMIERI. Transformation of Erythroid Cells by Rous Sarcoma Virus (RSV) ... 269

C. K. SHEWMAKER, JOHN R. CATON, CATHERINE M. HOUCK, AND RICHARD C. GARDNER. Transcription of Cauliflower Mosaic Virus Integrated into Plant Genomes ... 281

WEN-PO TSAI, TERRY D. COPELAND, AND STEPHEN OROSZLAN. Purification and Chemical and Immunological Characterization of Avian Reticuloendotheliosis Virus *gag*-Gene-Encoded Structural Proteins ... 289

MARK A. MOZOLA AND DAVID I. FRIEDMAN. A ϕ80 Function Inhibitory for Growth of Lambdoid Phage in Him Mutants of *Escherichia coli* Deficient in Integration Host Factor. I. Genetic Analysis of the Rha Phenotype ... 313

MARK A. MOZOLA, DEBRA L. CARVER, AND DAVID I. FRIEDMAN. A ϕ80 Function Inhibitory for Growth of Lambdoid Phage in Him Mutants of *Escherichia coli* Deficient in Integration Host Factor. II. Physiological Analysis of the Abortive Infection ... 328

DOUWE ZUIDEMA AND E. M. J. JASPARS. Specificity of RNA and Coat Protein Interaction in Alfalfa Mosaic Virus and Related Viruses ... 342

JOSEPH M. WEBER, CLAUDE V. DÉRY, M. AMIN MIRZA, AND JOSEPH HORVATH. Adenovirus DNA Synthesis Is Coupled to Virus Assembly ... 351

SHORT COMMUNICATIONS

MIROSLAV PÁTEK, JIŘÍ LUDVÍK, OLDŘICH BENADA, JITKA HOCHMANNOVÁ, JAN NEŠVERA, VLADIMÍR KRUMPHANZL, AND MICHAL BUČKO. New Bacteriophage-like Particles in *Corynebacterium glutamicum* ... 360

ELIANA CANELO, OLGA M. PHILLIPS, AND ROSO NICOLAU DEL ROURE. Relating Cistrons and Functions in Bacteriophage PM2 ... 364

AUTHOR INDEX FOR VOLUME 140 ... 368

SUBJECT INDEX FOR VOLUME 140 ... 369

Important titles in Epidemiology, Infectious Diseases, and Public Health from Academic Press...

HUMAN INTESTINAL MICROFLORA IN HEALTH AND DISEASE

Edited by DAVID J. HENTGES

This book contains information on the composition of the flora, its development, metabolic activities, importance to the host, and the consequences of upsetting its ecology.

1983, 576 pp., $65.50/ISBN: 0-12-341280-3

THE DIRECT DETECTION OF MICROORGANISMS IN CLINICAL SAMPLES

Edited by J. DONALD COONROD, LAWRENCE J. KUNZ, and MARY JANE FERRARO

This book illustrates the methodology, results, criticisms, and perspectives involved in the rapid detection of infectious diseases. Individual chapters provide inclusive information—from Gram's stain to enzymatic radioimmunoassays.

1983, 362 pp., $53.00/ISBN: 0-12-187780-9

ANTIMICROBIAL DRUG RESISTANCE

Edited by L. E. BRYAN

With a foreword by J. E. Davies

CONTENTS (Chapter Titles): Interaction of β-Lactam Antibiotics with β-Lactamases as a Cause for Resistance. β-Lactams Resistant to Hydrolysis by the β-Lactamases. Nonenzymatic Resistance to β-Lactam Antibiotics and Resistance to Other Cell Wall Synthesis Inhibitors. Intrinsic Resistance and Whole Cell Factors Contributing to Antibiotic Resistance. Resistance to Antibacterial Agents Acting on Cell Membranes. Resistance to Antibacterial Agents Acting on Antifolate Metabolism. Resistance to the Tetracyclines. Aminoglycoside Resistance. Resistance to Macrolides and Lincomycins. Resistance to Chloramphenicol and Fusidic Acid. Resistance to Nitrofurans and Nitroimidazoles. Bacterial Metal Ion Resistances. Resistance to Antiviral Agents. Resistance to Systemic Antifungal Agents. Resistance to Antimalarial Agents. Plasmids of Enteric Bacteria. Resistance Plasmids of *Pseudomonas aeruginosa*. Resistance Plasmids of *Haemophilus* and *Neisseria*. Antibiotic Resistance Plasmids of Streptococci, Staphylococci, and Bacteroides. Index.

July/August 1984, 600 pp., $79.00/ISBN: 0-12-138120-X

HEPATITIS A

Edited by ROBERT J. GERETY

Hepatitis A, contains chapters written by fifteen experts in areas of viral hepatitis. The chapters provide detailed reviews of the historical, medical, clinical, immunological, public health, and research aspects of the most transmissible of all viral hepatitides.

October/November 1984, c. 260 pp., in preparation
ISBN: 0-12-280670-0

Two companion volumes . . .

Based on the proceedings of a symposium held at Hilton Head, South Carolina September 11–17, 1983.

NONSEGMENTED NEGATIVE STRAND VIRUSES

Paramyxoviruses and Rhabdoviruses

Edited by DAVID H. L. BISHOP and RICHARD W. COMPANS

May/June 1984, 592 pp., $59.00*/ISBN: 0-12-102480-6

SEGMENTED NEGATIVE STRAND VIRUSES

Arenaviruses, Bunyaviruses, and Orthomyxoviruses

Edited by RICHARD W. COMPANS and DAVID H. L. BISHOP

May/June 1984, 440 pp., $49.00*/ISBN: 0-12-183501-4

***Set price for these companion volumes: $92.00** ($108.00, if purchased separately). Set prices are not valid in Australia or New Zealand.

INFECTIOUS COMPLICATIONS OF BLOOD TRANSFUSION

EDWARD TABOR

FROM THE REVIEWS: "This book is a compendium of important information on infectious diseases *vis a vis* transmission by blood or blood products . . . I would recommend this as a reference book for those concerned with the infectivity of blood and blood products."

—S. J. Urbaniak in **MEDICAL LABORATORY SCIENCES**

1983, 192 pp., $24.50/ISBN: 0-12-682140-2

Send payment with order and save postage and handling. Prices are in U.S. dollars and are subject to change without notice.

NOTICE TO AUTHORS

Editorial Policy. *Virology* will publish articles on the biological, biochemical, genetic, and biophysical aspects of virus research. All manuscripts should meet the following four basic criteria. *First*, they should report *original* research results. Manuscripts are accepted for review on the understanding that the same or similar work, wholly or in part, has not been and will not be nor is presently submitted for publication elsewhere. *Second*, they should report research that is *fundamental*, rather than applied. Emphasis should be directed at understanding mechanisms by which viruses function, rather than on descriptions of virological phenomena. *Third*, they should report research that is *pioneering* in nature. Authors should clearly understand that space limitations may make it impossible to publish manuscripts that describe work that was performed competently but that does not break new conceptual ground; papers that describe results that have already been obtained with closely related virus or cell systems may be accepted only in exceptional circumstances. *Fourth*, they should be written as concisely as possible, their length being the minimum compatible with a clear presentation and interpretation of the experimental data. Repetition, such as between the Materials and Methods section and figure legends, should be carefully avoided. The Introduction should contain only material relevant to the research that is described; and the Discussion, which should exceed two pages only in exceptional circumstances, should be constructively interpretative and not merely restate the experimental results. Good writing requires careful examination that every word, phrase, and sentence is essential and arranged in logical sequence.

Manuscripts are accepted for review on the understanding that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; that any person cited as a source of personal communications has approved such citations; that locally and nationally prescribed safety regulations governing exposure of laboratory personnel and contamination of the environment have been observed; and that all variant virus and cell strains described or mentioned in the paper will be freely available for distribution upon request to all qualified members of the scientific community. Written verification of these conditions may be required at the Editors' discretion. Articles and any other material published in *Virology* represent the opinions of the author(s) and should not be construed as reflecting the opinions of the Editors and the Publisher.

Manuscripts should be submitted in duplicate to the editorial office of *Virology*, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101, by first class mail in flat form.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of Manuscript. Manuscripts should be typewritten (not mimeographed), with wide margins on high quality bond paper, using double or triple spacing throughout. Subdivision of articles into *Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgments,* and *References* is recommended. The manuscript must begin with an *Abstract.* In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiment described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given. Reviews of the literature should be restricted to closely pertinent papers. Tables, figures, names, quotations, and bibliography (and all text references to the same) should be carefully checked for errors. A proposed running head of no more than 37 characters should be included.

Figures and Tables. Number all figures consecutively with Arabic numbers and give each one a descriptive legend. All illustrations should be in finished form suitable for reproduction. Figures should be planned to fit the proportion of the printed page (5½″ × 8″, column width: 2½″). Lettering on drawings should be made with a lettering set and should be large enough to take a reduction of 50–60 percent. Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper, if used, should be ruled in blue.

Photographs should be glossy prints with strong contrasts, and the magnification should be indicated by a scale. Photographs should be cropped to eliminate background material so that reproduction might be possible without reduction. Grouping of photographs should be indicated. Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numbers, and collected at the end of the manuscript. All tables must have descriptive headings and should be understandable without reference to the text.

References. Names of authors should be mentioned in the text with the year of publication in brackets. References should be listed alphabetically at the end of the paper as follows: Dawson, W. O., and Dodds, J. A. (1982). Characterization of subgenomic double-stranded RNAs from virus-infected plants. *Biochem. Biophys. Res. Commun.* **107,** 1230–1235. **See, however, the instructions** for *Short Communications* **below.** The names of journals should be abbreviated according to the *Chemical Abstracts Service Source Index,* 1980. References to books should include: author's name, year of publication, title of book (editor of book, if any), edition (if other than first), publisher, and place of publication.

Include in the reference list articles that are "in press," but incorporate in text or use footnotes for "manuscript in preparation," "unpublished observations," and "personal communication."

Abbreviations and Symbols. Where abbreviations are employed the author is asked to follow the usage established by *Chemical Abstracts Service Source Index*, 1980.

Nomenclature of Microorganisms. Binomial Latin names, with authorities, should be used in accordance with the International Rules of Nomenclature. Binomials should be underlined in the typewritten copy. A specific name should not be used without an accompanying capitalized generic name. The generic name for each species should be written in full where it first occurs in the text and again in the summary. Where the generic name appears frequently in the text it may be abbreviated by using the initial letter.

Short Communications. This section is open to short preliminary reports of important findings. They should not exceed six double-spaced typewritten pages including tables and illustrations. Do not use any section headings. All short communications must have abstracts. Illustrative material should be kept to a minimum (usually not more than one table or figure). Literature should be cited as follows: References should be given serial numbers in the text and listed consecutively at the end of the text (serial number, author, name of journal, volume, first and last page, and year of publication).

This section does not provide an accelerated means of publication, but is designed to offer the opportunity to present in brief form noteworthy results of works in progress.

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty copies of each article are granted free of charge and authors may order additional quantities.
